Remington

Remington Company is an American manufacturer of firearms and ammunition founded in 1816 in Ilion, New York. Eliphalet Remington II (1793 -1861) believed he could build a better gun than he could buy.

In the 19th and early 20th centuries, Remington meant “first” in fields as diverse as typewriters, knives, farm equipment and even bridges.

When Eliphalet Remington built his first rifle back in 1816, he had no idea he was attending the birth of one of the largest firearms companies in the world. For nearly two centuries, now Remington firearms have helped shape our nation’s history.

The world’s first successful breech-loading firearm mechanism was designed and built in Ilion, New York. The Remington rolling Block patent dates from 1864.

Remington firearms have helped shape our nation’s history. This incredible story comes to life at the Remington Museum. You’ll see flintlock rifles that helped settle America and muzzle-loaders from the battlefields of the Civil War. Target guns like those used by Annie Oakley are on display, along with rare pistols and revolvers. There are also other products out of Remington’s past on display.
